EXAMINER

ANGEBRANDT, MARTIN J

ART UNIT PAPER NUMBER

1756

DATE MAILED: 08/28/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/608,814

Applicant(s)

INOUE ET AL.

Examiner

Martin J. Angebranndt

Art Unit

1756

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 6/5/06 & 6/6/06.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,5,9,21-23,30,31,33 and 35 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,5,9,21-23,30,31,33 and 35 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 1756

1. The response of the applicant has been read and given careful consideration. The applicant did not argue any position, therefore no response is warranted.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(c) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1,5,9,21-23,30,31,33 and 35 are rejected under 35 U.S.C. 102(a) as being fully anticipated by Mizushima et al., JP 2003-054135.

Mizushima et al., JP 2003-054135 teaches an optical recording medium and method of use wherein the medium has a laminated recording layer containing a first sub-recording layer and a second sub-recording layer and both of the main component metals of the recording layers have melting points which are higher than 500°C wherein the metals alloy to form a record mark (abstract). These metals are diffused to be mixed by irradiation with a laser beam wherein upon

Art Unit: 1756

irradiation the reflectivity is changed irreversibly. The layers are indeed phase-change materials (claim 2) noting their change between amorphous to crystalline. The two layers are different metals (claim 1), and the materials substantially overlap those as claimed by the Applicants (note paragraphs 27-29). With regard to claims 9-10, Mizushima I teaches a protective layer as well as various dielectric layers (0039-0041, 0095-0101). As noted in the example (0058-0062) the first dielectric layer was made of 45 nm ZnS-SiO₂ and the recording layer contained a laminated two layer structure of Sb/Al (8 nm thick bilayer and the second dielectric was the same material as the first, but 65 nm thick [0108-0109]. However Al vs Te/Ge was also exemplified (0074). Examiner's assertion is that the same compounds will react the same way (or similarly) under the same circumstances and thus the materials of Mizushima I anticipate these irradiations. The recording powers are 3.5 and 7.0 mW as given in table 3 using a laser emitting at 405 nm [0114]. The media shown in figures 1 and 2 show show writing through the substrate, while that of figure 7 shows topside recording where each DL layer has two sublayers sandwiched by dielectric layers and a **protective layer** (2) topping them all

The examiner holds the position that the dielectric layers used in the embodiment of the prior art, the laser wavelength and the laser power are the same as used in working example 1, and therefore the examiner holds that the imaged media of Mizushima et al., JP 2003-054135 meet the claims to the imaged media as well as the functional language added to claims 1-6, 9-10 and 21.

When the certified translation is of record and the priority perfected, the rejection will be obviated, not before.

5. Claims 1,5,9,21-23,30,31,33 and 35 are rejected under 35 U.S.C. 102(e) as being fully anticipated by Hosoda et al., '218.

Hosoda et al. '218 teaches a write-once optical recording medium wherein as shown in figure 2 an alloying (17) occurs between the recording layers 14a and 14b. These recording layers are sandwiched between dielectric layers 15, 13 wherein 16 is a protective layer and 11 is a substrate (3:25-43). The dielectric layers are preferably materials such as ZnS, SiO₂, ZnS-SiO₂ and the like (4:44-55). The recording layers are as detailed at the top of column 4 wherein 14a (which anticipates Applicants' second recording layer) can be Ag and 14b (which anticipates Applicants' first recording layer) can be GeTe or Sn (see also description of figure 1, 5:47-6:35). Hosoda further teaches that it is desirable to increase the amount of Ge or Te when it is desirable to increase the amount of Ge or Te to generally slow down the crystallization rate (thereby making the amorphous state more stable). With regard to the Applicants' desirability of the ratio of $\lambda/NA \leq 640\text{nm}$ upon irradiation with a laser beam having a wavelength of λ via an objective lens having a numerical aperture NA, Examiner notes cases such as $\lambda=405\text{nm}$ and NA is 0.85 thereby anticipating λ/NA is approximately 476nm. The lower dielectric layer is 6 nm and the upper 45 nm and both are ZnS-SiO₂, the recording bilayer is 14 nm thick and the recording power is 5 mW. (5/1-33)

The examiner holds the position that the dielectric layers used in the embodiment of the prior art and the laser power are the same as used in working example 1, and therefore the examiner holds that the imaged media of Hosoda et al. '218 meet the claims to the imaged media as well as the functional language added to claims 1-6,9-10 and 21.

When the certified translation is of record and the priority perfected, the rejection will be obviated, not before.

6. Claims 1,5,9,21-23,30,31,33 and 35 are rejected under 35 U.S.C. 102(b) as being fully anticipated by Kobayashi et al. JP 62-204442. An English language translation of this abstract is provided. Examiner requests that if the Applicants have a translation made of this reference that such be provided with Applicant's response.

Kobayashi et al. JP 62-204442 teaches an optical recording media comprising a recording layer consisting of at least two kinds of phase-change films having different composition wherein the first recording layer is of Si ,Te, or the like and the second recording material is Au, Ag, Ge or the like. When the materials are recorded, the recording layers are alloyed. Recording layers (41, 42) are provided between dielectric layers (3, 5) wherein a protective layer (6) is opposite the substrate (2). With regard to the Applicants' capabilities of properties under specific irradiation, it is the Examiner's assertion is that the same compounds will react the same way (or similarly) under the same circumstances and thus the materials of Kobayashi anticipate these irradiations. While these properties are not specified in the English language abstract, it is further the Examiner's assertion that it would have been obvious to one of ordinary skill in the art at the time of invention to utilize the materials under near-field conditions, thereby satisfying these requirements. Examiner notes that with regard to claims 9-10 the additional dielectric layer furthest from the substrate acts as a "protective layer" as the dielectric layer can act as a barrier from damage from oxygen, mechanical contact and the like (further teaching found in example 4). The bilayer is 100 nm thick, the lower and upper dielectric layers are silicon dioxide and 100 nm thick. (example 4).

The writing power is 15 mW, which is three times higher than the 5 mW used in the instant application which is described as resulting in crystallization, so a reasonable expectation of crystallization is warranted.

7. Claims 1,5,9,21-23,30,31,33 and 35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kobayashi et al. JP 62-204442, as applied above, in view of Morimoto et al., '345.

Morimoto et al. '345 teaches that the reflective layer may be on the same side of the recording film as the substrate if topside recording is to be used and on the opposite side of the recording films from the substrate if the recording is to take place through the substrate (6:42-65). The dielectric layers are disclosed as providing improvements in the stability and sensitivity of the overall device (7:42-8:12). The prevention of direct contact with the recording layer is further disclosed (7:1-10). The thickness of the dielectric layers may be 10 to 500 nm (7:51-8/12).

It would have been obvious to one of ordinary skill in the art at the time of invention to make the device of Kobayashi with a thinner protective layers with a reasonable expectation of success as Morimoto et al. '345 teaches that layer thicknesses of 10-500 nm would work to provide protection from damage from oxygen and mechanical contact.

The writing power is 15 mW, which is three times higher than the 5 mW used in the instant application which is described as resulting in crystallization, so a reasonable expectation of crystallization is warranted.

Art Unit: 1756

8. Claims 1,5,9,21-23,30,31,33 and 35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kobayashi et al. JP 62-204442, in view of Morimoto et al., '345, firther in view of Shuy et al. '160 or Lee et al 819.

Shuy et al. '160 teaches a transparent layer of Ge, Si, GaP, InP, GaAs, InAs, ZnSb, TiO₂, Sb-Zn oxide as a transparent layer (30) in a thickness of 5-500 nm and reflective layer (40) may be Ag, Al, Au, Pt, Cu, Sn, Ir, Ta and alloys and/or combinations thereof in a thickness of 1-500 nm. [0026-0027]. The examples use silicon and gold as the materials. In figure 1A, the provision of thermal manipulation layers (dielectric layers) is disclosed and the use of protective layers is disclosed. (60). Shuy et al. '160 further teaches in embodiment 4 that a substrate (10) with a layering sequence of ZnS-SiO₂/ Si/ (Si-Au)/(ZnS-SiO₂)₂ is formed. The recording uses 1-5 V pulses at 780 nm. The examples use 2 or 3V.

Lee et al 819 teaches an optical recording medium comprising an alloying of adjoining layers 14 and 16 (figure 4). Preferably the material consists of a PMMA substrate followed by a deposition of Al / Ge/ and a passivating layer of SiO₂ as shown in figure 1 (3:25-38). Similar mediums of Al/Si/MgO on a PMMA substrate (3:39-49) and Sn/Pb/Ge-Al (3:50-61) were also formed wherein the dielectric layer is light transmissible. The laser power is not described.

In addition to the basis above, it would have been obvious to one skilled in the art to use other bilayer combination, such as those taught by Shuy et al. '160 or Lee et al 819, in place of those specifically used in the combination of Kobayashi et al. JP 62-204442, in view of Morimoto et al., '345 with a reasonable expectation of forming a useful write once alloying optical recording media.

9. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or

Art Unit: 1756

improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

10. Claims 1,5,9 and 21 of this application conflict with claims 1,3,5,7,9,13-15,17,19,21,23,25,27,29,31,33,35,37-40 and 42-55 of Application No. 10/423,686. (US 2003/0202452) 37 CFR 1.78(b) provides that when two or more applications filed by the same applicant contain conflicting claims, elimination of such claims from all but one application may be required in the absence of good and sufficient reason for their retention during pendency in more than one application. Applicant is required to either cancel the conflicting claims from all but one application or maintain a clear line of demarcation between the applications. See MPEP § 822. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

No mention was made of the obviousness double patenting rejections and so they stand.

11. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1,3,5,7,9,13-15,17,19,21,23,25,27,29,31,33,35,37-40 and 42-55 of Application No. 10/423,686. (US

Art Unit: 1756

2003/0202452) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-46 of Application No. 10/423,686. (US 2003/0202452) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

This is a provisional obviousness-type double patenting rejection.

12. Claims 1,5,9 and 21 of this application conflict with claims 1-4,9-20 and 22-44 of Application No. 10/406,109 (US 2003/0190551). 37 CFR 1.78(b) provides that when two or more applications filed by the same applicant contain conflicting claims, elimination of such claims from all but one application may be required in the absence of good and sufficient reason for their retention during pendency in more than one application. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the copending application overlaps with the embodiment of the instant claims where Cu is the primary element (claim 2) and the additive is Al, Zn, Ag, Sn, Ti, Mg or Au (claim 7) and the first recording layer is any of Si, Ge, Sn, Mg, In, Zn, Bi or Al. Applicant is required to either cancel the conflicting claims from all but one application or maintain a clear line of demarcation between the applications. See MPEP § 822. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Art Unit: 1756

13. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-44 of Application No. 10/406,109 (US 2003/0190551) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-44 of Application No. 10/406,109 (US 2003/0190551) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

This is a provisional obviousness-type double patenting rejection.

14. Claims 1,5,9 and 21 of this application conflict with claims 1-19 of copending Application No. 10/764,805 (US 2004/0157158). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the copending application overlaps with the embodiment of the instant claims where Cu is the primary element and Al is the additive and the first recording layer is any of Si, Ge, Sn, Mg, In, Zn, Bi or Al. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

15. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-19 of

Art Unit: 1756

compending Application No. 10/764,805 (US 2004/0157158) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-19 of compending Application No. 10/764,805 (US 2004/0157158) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

This is a provisional obviousness-type double patenting rejection.

16. Claims 1,5,9 and 21 of this application conflict with claims 1-12 of compending Application No. 10/896,110 (US 2005/0018591). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the compending application overlaps with the embodiment of the instant claims where Cu is the primary element and Si is the additive and the first recording layer is Si. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

17. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-12 of compending Application No. 10/896,110 (US 2005/0018591) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once

Art Unit: 1756

Disc for High Speed Recording” J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061

(02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-12 of copending Application No. 10/896,110 (US 2005/0018591) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., ‘218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., “Inorganic Write-once Disc for High Speed Recording” J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

This is a provisional obviousness-type double patenting rejection.

18. Claims 1,5,9 and 21 of this application conflict with claims 1-12 of copending Application No. 10/923,666 (US 2005/0047301). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the copending application overlaps with the embodiment of the instant claims where Cu is the primary element and Mg is the additive and the first recording layer is Si. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

19. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-12 of copending Application No. 10/896,110 (US 2005/0018591) in view of Hosoda et al., ‘218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., “Inorganic Write-once Disc for High Speed Recording” J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-12 of copending Application No. 10/896,110 (US 2005/0018591) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

This is a provisional obviousness-type double patenting rejection.

20. Claims 1,5,9 and 21 of this application conflict with claims 1-19 of copending Application No. 10/923,699 (US 2005/0047306). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the copending application overlaps with the embodiment of the instant claims where Cu is the primary element and Au is the additive and the first recording layer is Si. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

21. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-19 of copending Application No. 10/923,699 (US 2005/0047306) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-19 of copending Application No. 10/923,699 (US 2005/0047306) by using higher laser powers

bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

This is a provisional obviousness-type double patenting rejection.

22. Claims 1,5,9 and 21 of this application conflict with claims 1-12 of copending Application No. 10/923,679 (US 2005/0047304). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the copending application overlaps with the embodiment of the instant claims where Cu is the primary element and Zn is the additive and the first recording layer is Si. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

23. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-12 of copending Application No. 10/923,679 (US 2005/0047304) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-12 of copending Application No. 10/923,679 (US 2005/0047304) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for

Art Unit: 1756

High Speed Recording” J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

This is a provisional obviousness-type double patenting rejection.

24. Claims 1,5,9 and 21 of this application conflict with claims 1-27 of copending Application No. 10/613,525 (US 2004/0052194). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the copending application overlaps with the embodiment of the instant claims where Cu is the primary element (claim 3) and the additive is Al, Zn, Sn, Mg or Au (claim 4) and the first recording layer is any of Si, Ge, Sn, Mg, In, Zn, Bi or Al. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

25. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-27 of copending Application No. 10/613,525 (US 2004/0052194) in view of Hosoda et al., ‘218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., “Inorganic Write-once Disc for High Speed Recording” J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-19 of copending Application No. 10/613,525 (US 2004/0052194) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., ‘218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., “Inorganic Write-once Disc for High Speed Recording” J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or

Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

This is a provisional obviousness-type double patenting rejection.

26. Claims 1,5,9 and 21 of this application conflict with claims 1-20 of copending Application No. 10/684981 (US 2004/0076907). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the copending application overlaps with the embodiment of the instant claims where Cu is the primary element (claim 11) and the additive is Al, Zn, Ag, Sn, Ti, Mg or Au (claim 13) and the first recording layer is any of Si, Ge, Sn, Mg, In, Zn, Bi or Al. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

27. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-20 of copending Application No. 10/684981 (US 2004/0076907) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-20 of copending Application No. 10/684981 (US 2004/0076907) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or

Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

This is a provisional obviousness-type double patenting rejection.

28. Claims 1,5,9 and 21 of this application conflict with claims 1-24 of copending Application No. 10/717,831 (US 2004/0110086). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the copending application overlaps with the embodiment of the instant claims where Cu is the primary element (claim 1) and the additive is Al, Zn, Sn, Mg or Au (claim 13) and the first recording layer is any of Si, Ge, Sn, Mg, In, Zn, Bi or Al. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

29. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-24 of copending Application No. 10/717,831 (US 2004/0110086) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-24 of copending Application No. 10/717,831 (US 2004/0110086) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061

Art Unit: 1756

(02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

This is a provisional obviousness-type double patenting rejection.

30. Claims 1,5,9 and 21 of this application conflict with claims 1-19 of copending Application No. 10/792083 (US 2004/0174804). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the copending application overlaps with the embodiment of the instant claims where Cu is the primary element (claim 1) and the additive is Al, Zn, Sn, Mg or Au (claim 13) and the first recording layer is any of Si, Ge, Sn, Mg, In, Zn, Bi or Al. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

There is a dielectric on each side of both the recording layers.

31. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-19 of copending Application No. 10/792083 (US 2004/0174804) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-19 of copending Application No. 10/792083 (US 2004/0174804) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061

(02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

This is a provisional obviousness-type double patenting rejection.

32. Claims 1,5,9 and 21 of this application conflict with claims 1-24 of copending Application No. 10/808628 (US 2004/0191685). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the copending application overlaps with the embodiment of the instant claims where Cu is the primary element (claim 1) and the additive is Al, Zn, Sn, Mg or Au (claim 13) and the first recording layer is any of Si, Ge, Sn, Mg, In, Zn, Bi or Al. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

As the issue fee has been paid, the provisional nature of this rejection may be withdrawn.

33. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-24 of copending Application No. 10/808628 (US 2004/0191685) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-24 of copending Application No. 10/808628 (US 2004/0191685) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061

(02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

This is a provisional obviousness-type double patenting rejection.

As the issue fee has been paid, the provisional nature of this rejection may be withdrawn.

34. Claims 15,9 and 21 of this application conflict with claims 2-6,9-11 and 13--36 of copending Application No. 10/444172 (US 2003/0223351). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the copending application overlaps with the embodiment of the instant claims where Cu is the primary element (claim 1) and the additive is Al, Zn, Sn, Mg or Au (claim 13) and the first recording layer is any of Si, Ge, Sn, Mg, In, Zn, Bi or Al. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

35. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 2-6,9-11 and 13-36 of copending Application No. 10/444172 (US 2003/0223351) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-36 of copending Application No. 10/444172 (US 2003/0223351) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061

(02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

This is a provisional obviousness-type double patenting rejection.

36. Claims 1,5,9 and 21 of this application conflict with claims 1-40 of copending Application No. 10/425571 (US 2003/0231577). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the copending application overlaps with the embodiment of the instant claims where Cu is the primary element (claim 1) and the additive is Al, Zn, Sn, Mg or Au (claim 13) and the first recording layer is any of Si, Ge, Sn, Mg, In, Zn, Bi or Al. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

As the issue fee has been paid, the provisional nature of this rejection may be withdrawn.

37. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-40 of copending Application No. 10/425571 (US 2003/0231577) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-40 of copending Application No. 10/425571 (US 2003/0231577) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061

Art Unit: 1756

(02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

This is a provisional obviousness-type double patenting rejection.

38. Claims 1,5,9 and 21 of this application conflict with claims 1-20 of copending Application No. 10/637407 (US 2004/0027973). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the copending application overlaps with the embodiment of the instant claims where Cu is the primary element (claim 1) and the additive is Al, Zn, Sn, Mg or Au (claim 13) and the first recording layer is any of Si, Ge, Sn, Mg, In, Zn, Bi or Al. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

39. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-20 of copending Application No. 10/637407 (US 2004/0027973) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-20 of copending Application No. 10/637407 (US 2004/0027973) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061

(02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

40. Claims 1,5,9 and 21 of this application conflict with claims 1,4-7 of copending Application No. 10/896051 (US 2005/0018590). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the copending application overlaps with the embodiment of the instant claims where Cu is the primary element (claim 1) and the additive is Al, Zn, Sn, Mg or Au (claim 13) and the first recording layer is any of Si, Ge, Sn, Mg, In, Zn, Bi or Al. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

41. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1, 4-7 of copending Application No. 10/896051 (US 2005/0018590) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-7 of copending Application No. 10/896051 (US 2005/0018590) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

Art Unit: 1756

42. Claims 1,5,9 and 21 of this application conflict with claims 1-8 of copending Application No. 10/896117 (US 2005/0018592). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the copending application overlaps with the embodiment of the instant claims where Cu is the primary element (claim 1) and the additive is Al, Zn, Sn, Mg or Au (claim 13) and the first recording layer is any of Si, Ge, Sn, Mg, In, Zn, Bi or Al. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

43. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-8 of copending Application No. 10/896117 (US 2005/0018592) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-8 of copending Application No. 10/896117 (US 2005/0018592) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

44. Claims 1,5,9 and 21 of this application conflict with claims 1-8 of copending Application No. 10/923665 (US 2005/0048249). Although the conflicting claims are not identical, they are

Art Unit: 1756

not patentably distinct from each other because the claims of the copending application overlaps with the embodiment of the instant claims where Cu is the primary element (claim 1) and the additive is Al, Zn, Sn, Mg or Au (claim 13) and the first recording layer is any of Si, Ge, Sn, Mg, In, Zn, Bi or Al. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

45. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-8 of copending Application No. 10/923665 (US 2005/0048249) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-8 of copending Application No. 10/923665 (US 2005/0048249) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

46. Claims 1,5,9 and 21 of this application conflict with claims 1-7 of copending Application No. 10/923674 (US 2005/0047303). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the copending application overlaps with the embodiment of the instant claims where Cu is the primary element (claim 1) and the

Art Unit: 1756

additive is Al, Zn, Sn, Mg or Au (claim 13) and the first recording layer is any of Si, Ge, Sn, Mg, In, Zn, Bi or Al. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

47. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-7 of copending Application No. 10/923674 (US 2005/0047303) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims claims 1-7 of copending Application No. 10/923674 (US 2005/0047303) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

48. Claims 1,5,9 and 21 of this application conflict with claims 1-8 of copending Application No. 10/923673 (US 2005/0047302). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the copending application overlaps with the embodiment of the instant claims where Cu is the primary element (claim 1) and the additive is Al, Zn, Sn, Mg or Au (claim 13) and the first recording layer is any of Si, Ge, Sn, Mg,

Art Unit: 1756

In, Zn, Bi or Al. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

49. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-8 of copending Application No. 10/923673 (US 2005/0047302) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-8 of copending Application No. 10/923673 (US 2005/0047302) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

50. Claims 1,5,9 and 21 of this application conflict with claims 1-8 of copending Application No. 10/923682 (US 2005/0047305). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the copending application overlaps with the embodiment of the instant claims where Cu is the primary element (claim 1) and the additive is Al, Zn, Sn, Mg or Au (claim 13) and the first recording layer is any of Si, Ge, Sn, Mg, In, Zn, Bi or Al. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Art Unit: 1756

51. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-8 of copending Application No. 10/923682 (US 2005/0047305) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-8 of copending Application No. 10/923682 (US 2005/0047305) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

52. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-8 of copending Application No. 10/923682 (US 2005/0047305) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-8 of copending Application No. 10/923682 (US 2005/0047305) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

53. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-8 of copending Application No. 10/923682 (US 2005/0047305) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-8 of copending Application No. 10/923682 (US 2005/0047305) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

54. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-8 of copending Application No. 10/923682 (US 2005/0047305) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-8 of copending Application No. 10/923682 (US 2005/0047305) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

55. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-8 and 11-12 of copending Application No. 10/923666 (US 2005/0047301) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-8 and 11-12 of copending Application No. 10/923666 (US 2005/0047301) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

56. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-31 of copending Application No. 10/748979 (US 2004/0152016) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-31 of copending Application No. 10/748979 (US 2004/0152016) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

57. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-19 of

Art Unit: 1756

copending Application No. 10/818324 (US 2004/0202097) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-31 of copending Application No. 10/818324 (US 2004/0202097) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

58. Claims 1,5,9,21-23,30,31,33 and 35 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1,5,7 and 9-12 of copending Application No. 10/612615 (US 2004/0004932) in view of Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061 (02/2003) or Mizushima et al., JP 2003-054135.

It would have been obvious to one skilled in the art to modify the invention of claims 1-8 of copending Application No. 10/923682 (US 2005/0047305) by using higher laser powers bearing in mind that the alloying is irreversible as taught in either Hosoda et al., '218, Harigai et al., JP 06-171236, Kobayashi et al. JP 62-204442, Inoue et al., "Inorganic Write-once Disc for High Speed Recording" J. Appl. Phys., Vol. 42, part 1, No. 2B pp. 1059-1061

Art Unit: 1756

(02/2003) or Mizushima et al., JP 2003-054135, where the powers are similar to those described in the instant specification.

59. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Martin J. Angebranndt whose telephone number is 571-272-1378. The examiner can normally be reached on Monday-Thursday and alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Huff can be reached on 571-272-1385. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
